Automatic leasing device CLT.

Equipped with CLT, our Reeling Machine HB 500 IPC represents the most economical solution for reliable, high output in combination with best reeling results.

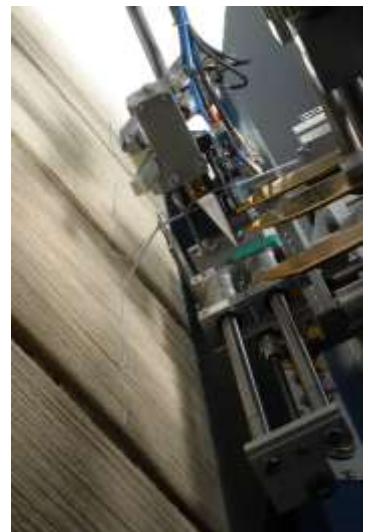

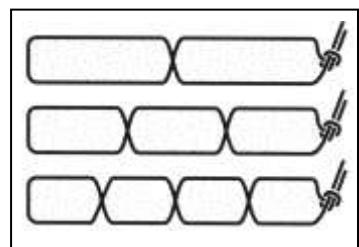

Especially with mercerising or all kind of carpet yarns, C+L's reeling machine with IPC control system and completed with the automatic leasing device CLT effects unbeatable hank quality for a superb result with the final product.

Each hank from the first doff in the morning until the very last one of the working shift will show the same make and finish to put you in the position to perfectly set-up the following process of mercerising and/or dying.

Features:

- Automatic leasing working independently on both sides
- standard hank width max. 380 mm, also available as special version for max. hank width of 450 mm
- 1, 2, 3, 4 or 6 leases per hank possible
- Various leasing methods are adjustable:
 - *single eight*
 - *one and a half eight*
 - *double eight*
- cat's head type of knotting
- turnable separators (arrow shape) for hank opening, insertion of leasing cord with hollow needle
- leasing time approx. 10-13,5 sec. per lease, depending on yarn quality
- start and end of hank can be tied separately (to first and second lease)
- lease cord tension adjustable by yarn feeder
- lease cord Nm 2 – Nm 5 (Nm 10/2)
- parking position of CLT devices beside head stock
- automatic leasing can be switched-off for manual operation
- electrical connection to reeling machine with trailing cable
- separate maintenance mounting unit for CLT device included
- solid design, easy maintenance and long life expectancy
